Laser Hair Center Q and A

1. Why does hair fall out?

Are you familiar with Dy-hydro testosterone other wise known as DHT? DHT causes hair follicles to stop producing the thick healthy hair we once had. Follicles become clog9ed with unhealthy debris and nutrient clogging cellular waste products. Hair fats out and falls to grow back naturally. If left untreated the follicles fibroses will eventually die.

2. How does the Laser Hair Program work?

The loser Hair Program involves a select treatment process specific to your condition to take control your hair loss aid re-grow your lost hair. The program is clinically proven to rejuvenate hair growth in more than 85% of the people who follow it.

3. Are there any side effects?

No. There we no short or long term side effects with the Laser Hair Therapy Class IIIA laser unit. It is designated safe for cosmetic purposes. The topical activator solution is FDA approved.

4. Does It hurt?

No. There is no pain associated with any aspect of the program. The laser is a Low Level Diode Laser without a thermal component A tingling sensation of the scalp is often noticed dining use due to increase in blood and nutrient flow into the scalp and hair follicles.

5. How long has this product been on the market?

This program is new to the general public however, people have been using low level lasers for over a decade.

6. How is the program administered?

A certified Technician specialized in the treatment of hair loss, will follow your progress and administer the treatment during the program.
